ABSTRACT

State and county estimates of basic statistics relevant to educational planning in South Carolina are presented. The report includes actual and projected counts for grades 9 and 12, as well as actual and projected counts of first grade membership, high school graduates, and graduates who enter a college degree program. Enrollment figures have been replaced by average daily membership counts, and all projected grade counts are based on average daily membership. Membership projections are calculated using the cohort survival method incorporating 5 years of historical membership data. The 57,239 reported live births in 1989 represented the largest count recorded since 1963. There were 663 fewer first-grade students in 1989-90 (56,178) than in 1988-89. In 1989, about 68% of the first-graders of 1977-78 graduated. The 12th-grade graduation rate was about 95% in 1988-89, as compared to 94% in 1978-79. Forty-seven pages of tables provide data concerning births, selected grade comparisons, high school graduates, and number entering college for the state as a whole and 46 counties. (SLD)

INTRODUCTION

This report provides state and county estimates of basic statistics that are relevant to educational planning in South Carolina. Beginning with the October 1988 edition, this report was expanded to include actual and projected counts for the ninth and twelfth grades in addition to actual and projected counts of first grade membership, high school graduates and graduates who enter a college degree program. Also, in the October 1988 and subsequent editions, enrollment figures are replaced by average daily membership counts where available; and all projected grade counts are based on average daily membership. In each table, projections are located below the black line and actual counts above the black line.

The historical counts for live births are compiled by place of residence. These counts are taken from the various annual reports of the State Department of Health and Environmental Control. The counts for first, ninth, and twelfth grades prior to the 1978-79 school year are the official enrollments in those grades. Student counts in ungraded classes and self-contained special education classes are distributed across appropriate grade levels. Beginning with the 1978-79 school year, all student counts are based on average daily membership. These counts are rounded to integer values, and computations are based on rounded numbers. All enrollments and membership data are taken from the official student counts collected by the Office of Finance and summarized by the Office of Research, both within the State Department of Education. The counts for high school graduates and graduates entering college are taken from the tables "Graduates of South Carolina High Schools Enrolled in College Freshman Courses" which appear in the *Annual Report of the State Superintendent of Education*, 1979-80 through 1988-89 and the compiled data for the 1989-90 report. The number of high school graduates entering college in the Fall is identified in the source documents as students entering junior or senior colleges or degree programs in technical education colleges.

In each table, first grade student counts are expressed as a percent of the births six years earlier. Ninth grade student counts are expressed as a percent of first grade counts as reported eight years earlier. The number of high school graduates is presented as a percent of the corresponding first, ninth, and twelfth grade student counts. Changes in net migration, attendance in other than public schools, variation in promotion rates, dropouts and re-entries as well as the conversion in the student base influence such grade comparisons.

Membership projections are calculated using the cohort survival method incorporating five years of historical membership data. Improvement occurring in actual cohort survival rates, therefore, will be reflected in annual projection updates. High school graduation projections are based on the graduation rate of the most recent year available. Current efforts to reduce dropouts may result in higher graduation rates than those projected. Projections of the numbers of high school graduates entering college are based on the college entrance rate of the most recent year available. Because less than one year elapses between graduation and entering college, the percent of high school graduates entering college is affected much less by changes in migration and survival rates than the previously described comparisons. However, economic trends and alternatives to junior and senior colleges may affect this statistic.

Caution should be exercised by all users of the projections in this publication. These projections, to a great extent, are functions of recent trends. Possible reporting errors or fluctuations in the reported actual counts from one year to another affect the projections. Updates will reflect changing trends.

-------------------	----

OVERVIEW

The 57,239 reported live births in 1989 was the largest recorded count since 1963. However, approximately 2,700 fewer live births were reported in 1989 than in 1961, the first reporting year in this report. In the past one year (1988 to 1989), the number of live births increased by 2,150.

The first grade of 1989-90 with 56,178 students was 663 smaller than the first grade of 1988-89. Over the years, the number of first graders has fluctuated. However, during the period from 1981-82 through 1988-89, the size of the first grade steadily increased from a low of 47,145 to 56,841. The 1988-89 count was, in fact, the largest since 1970-71 when 62,152 first graders were reported. Most of the increases can be attributed to the rise in live births. Recent trends in tightening promotion standards in South Carolina probably have affected the size of the first grade as well. Under current local policies, students not meeting curriculum standards would be required to repeat the first grade.

The ninth grade for a number of years in the 1970's was smaller than the first grade eight years earlier. This phenomenon probably was due to student fallout (non-promotions, dropout, and transfers). In the 1980's, the ninth grade was larger in size when compared to the appropriate first grade. The ninth grade swell appears to be the result of grade repeaters obtaining freshman status or maintaining freshman status for more than one school term.

In 1979, a little over one-half (55.17%) of the first grade students of 1967-68 graduated after eleven years. In 1989, approximately sixty-eight percent of the first grade students of 1977-78 graduated.

In the 1970's, a little over sixty-three percent of the ninth grade graduated three years later. During the 1980's, the ninth grade graduation rate increased slightly to about sixty-six percent. Unless trends change, expectations are that this rate will decrease slightly over the next seven years. As alternative programs are implemented and additional efforts are made to encourage students to remain in school, further improvement in graduation rate may occur. However, only the last three projected rates (1994 to 1996) could show any substantial improvement, since factors partially affecting rates prior to 1994 have already occurred, i.e., the ninth grade counts are actuals.

The twelfth grade graduation rate was approximately ninety-four percent in 1978-79 and was approximately ninety-five percent in 1988-89. Expectations are that this rate will remain about the same over the projected period. With approximately forty-nine percent of graduating seniors of 1989 entering college the following Fall, a new all-time high rate for students entering college was reached for the fourth consecutive year.

In some counties, selected grade comparisons as well as grade to high school graduate comparisons yielded large differences from year to year. Some of the differences are due to enrollment for one student group being compared to average daily membership for the cohorts several years later, since the official base in counting students had changed over the intervening years. However, the observed differences include greater year-to-year variation than that caused by a change in the student base. In a few instances, the comparison of graduates to the twelfth grade membership yielded values greater than 100 percent due to factors such as students graduating without gaining twelfth grade status and the use of a headcount for graduates and a calculated figure for average daily membership. Further study to explain the observed differences at the local level is encouraged. Caution should be exercised in making survival comparisons over time in that the grade groups are affected by numerous factors, and the comparisons are actually made for groups which include different individuals.

METHODOLOGY

The projected student comparisons were obtained using the following publications and techniques:

- 1) Student projections by grade were obtained from the publication Membership Projections for South Carolina Schools, 1991-1996 developed by the Office of Research within the South Carolina Department of Education.
- 2) County projections of high school graduates were developed by assuming that the number of graduates will be proportional to the twelfth grade membership of the same year.
- 3) County projections for the number of graduates entering college degree programs were obtained by assuming that the number entering college will be proportional to the number of graduates of that same year.
- 4) Projections for student counts by grade, high school graduates and number of graduates entering college degree programs were rounded to tens for each county. State figures were obtained by summing county figures and rounding to hundreds.

1989	57,239	1995-96	60,800	106.22												

a) The above counts exclude students within Felton Laboratory School, South Carolina School for the Deaf and the Blind, Palmetto Unified School District, and South Carolina Youth Services District. In a few instances, student counts may differ slightly from cited source documents due to the inclusion of data from school reports that were received after the sources were published.

b) Counts include only the students who entered college in the fall of the year immediately following the school year in which graduation occurred.

c) Counts by grade will differ slightly from that shown within the source documents cited in the "Bibliography" due to the distribution of students within ungraded classes and self-contained special education classes into appropriate grades.

d) Student counts prior to the 1978-79 school year were taken from the 180-Day Enrollment Collection (official count); student counts thereafter were taken from the 135-Day Average Daily Membership Collection (official count). All projected figures, however, are based on Average Daily Membership.

e) The above graduation rates (% high school graduates) do not reflect current efforts to reduce dropouts. Some of the displayed rates for future years are partially based on factors that already have occurred. Any substantial improvement in the rates will be due to current programs, the impact of which cannot yet fully be determined.

a) In a few instances, student counts may differ slightly from cited source documents due to the inclusion of data from school reports that were received after the sources were published.

b) Counts include only the students who entered college in the fall of the year immediately following the school year in which graduation occurred.

c) Counts by grade will differ slightly from that shown within the source documents cited in the "Bibliography" due to the distribution of students within ungraded classes and self-contained special education classes into appropriate grades.

d) Student counts prior to the 1978-79 school year were taken from the 180-Day Enrollment Collection (official count); student counts thereafter were taken from the 135-Day Average Daily Membership Collection (official count). All projected figures, however, are based on Average Daily Membership.

e) The above graduation rates (% high school graduates) do not reflect current efforts to reduce dropouts. Some of the displayed rates for future years are partially based on factors that already have occurred. Any substantial improvement in the rates will be due to current programs, the impact of which cannot yet fully be determined.

- a) In a few instances, student counts may differ slightly from cited source documents due to the inclusion of data from school reports that were received after the sources were published.
- b) Counts include only the students who entered college in the fall of the year immediately following the school year in which graduation occurred.
- c) Counts by grade will differ slightly from that shown within the source documents cited in the "Bibliography" due to the distribution of students within ungraded classes and self-contained special education classes into appropriate grades.
- d) Student counts prior to the 1978-79 school year were taken from the 180-Day Enrollment Collection (official count); student counts thereafter were taken from the 135-Day Average Daily Membership Collection (official count). All projected figures, however, are based on Average Daily Membership.
- e) The above graduation rates (% high school graduates) do not reflect current efforts to reduce dropouts. Some of the displayed rates for future years are partially based on factors that already have occurred. Any substantial improvement in the rates will be due to current programs, the impact of which cannot yet fully be determined.

a) In a few instances, student counts may differ slightly from cited source documents due to the inclusion of data from school reports that were received after the sources were published.

b) Counts include only the students who entered college in the fall of the year immediately following the school year in which graduation occurred.

c) Counts by grade will differ slightly from that shown within the source documents cited in the "Bibliography" due to the distribution of students within ungraded classes and self-contained special education classes into appropriate grades.

d) Student counts prior to the 1978-79 school year were taken from the 180-Day Enrollment Collection (official count); student counts thereafter were taken from the 135-Day Average Daily Membership Collection (official count). All projected figures, however, are based on Average Daily Membership.

e) The above graduation rates (% high school graduates) do not reflect current efforts to reduce dropouts. Some of the displayed rates for future years are partially based on factors that already have occurred. Any substantial improvement in the rates will be due to current programs, the impact of which cannot yet fully be determined.

a) In a few instances, student counts may differ slightly from cited source documents due to the inclusion of data from school reports that were received after the sources were published.

b) Counts include only the students who entered college in the fall of the year immediately following the school year in which graduation occurred.

c) Counts by grade will differ slightly from that shown within the source documents cited in the "Bibliography" due to the distribution of students within ungraded classes and self-contained special education classes into appropriate grades.

d) Student counts prior to the 1978-79 school year were taken from the 180-Day Enrollment Collection (official count); student counts thereafter were taken from the 135-Day Average Daily Membership Collection (official count). All projected figures, however, are based on Average Daily Membership.

e) The above graduation rates (% high school graduates) do not reflect current efforts to reduce dropouts. Some of the displayed rates for future years are partially based on factors that already have occurred. Any substantial improvement in the rates will be due to current programs, the impact of which cannot yet fully be determined.

a) In a few instances, student counts may differ slightly from cited source documents due to the inclusion of data from school reports that were received after the sources were published.

b) Counts include only the students who entered college in the fall of the year immediately following the school year in which graduation occurred.

c) Counts by grade will differ slightly from that shown within the source documents cited in the "Bibliography" due to the distribution of students within ungraded classes and self-contained special education classes into appropriate grades.

d) Student counts prior to the 1978-79 school year were taken from the 180-Day Enrollment Collection (official count); student counts thereafter were taken from the 135-Day Average Daily Membership Collection (official count). All projected figures, however, are based on Average Daily Membership.

e) The above graduation rates (% high school graduates) do not reflect current efforts to reduce dropouts. Some of the displayed rates for future years are partially based on factors that already have occurred. Any substantial improvement in the rates will be due to current programs, the impact of which cannot yet fully be determined.

a) In a few instances, student counts may differ slightly from cited source documents due to the inclusion of data from school reports that were received after the sources were published.

b) Counts include only the students who entered college in the fall of the year immediately following the school year in which graduation occurred.

c) Counts by grade will differ slightly from that shown within the source documents cited in the "Bibliography" due to the distribution of students within ungraded classes and self-contained special education classes into appropriate grades.

d) Student counts prior to the 1978-79 school year were taken from the 180-Day Enrollment Collection (official count); student counts thereafter were taken from the 135-Day Average Daily Membership Collection (official count). All projected figures, however, are based on Average Daily Membership.

e) The above graduation rates (% high school graduates) do not reflect current efforts to reduce dropouts. Some of the displayed rates for future years are partially based on factors that already have occurred. Any substantial improvement in the rates will be due to current programs, the impact of which cannot yet fully be determined.

a) In a few instances, student counts may differ slightly from cited source documents due to the inclusion of data from school reports that were received after the sources were published.

b) Counts include only the students who entered college in the fall of the year immediately following the school year in which graduation occurred.

c) Counts by grade will differ slightly from that shown within the source documents cited in the "Bibliography" due to the distribution of students within ungraded classes and self-contained special education classes into appropriate grades.

d) Student counts prior to the 1978-79 school year were taken from the 180-Day Enrollment Collection (official count); student counts thereafter were taken from the 135-Day Average Daily Membership Collection (official count). All projected figures, however, are based on Average Daily Membership.

e) The above graduation rates (% high school graduates) do not reflect current efforts to reduce dropouts. Some of the displayed rates for future years are partially based on factors that already have occurred. Any substantial improvement in the rates will be due to current programs, the impact of which cannot yet fully be determined.

a) In a few instances, student counts may differ slightly from cited source documents due to the inclusion of data from school reports that were received after the sources were published.

b) Counts include only the students who entered college in the fall of the year immediately following the school year in which graduation occurred.

c) Counts by grade will differ slightly from that shown within the source documents cited in the "Bibliography" due to the distribution of students within ungraded classes and self-contained special education classes into appropriate grades.

d) Student counts prior to the 1978-79 school year were taken from the 180-Day Enrollment Collection (official count); student counts thereafter were taken from the 135-Day Average Daily Membership Collection (official count). All projected figures, however, are based on Average Daily Membership.

e) The above graduation rates (% high school graduates) do not reflect current efforts to reduce dropouts. Some of the displayed rates for future years are partially based on factors that already have occurred. Any substantial improvement in the rates will be due to current programs, the impact of which cannot yet fully be determined.

a) In a few instances, student counts may differ slightly from cited source documents due to the inclusion of data from school reports that were received after the sources were published.

b) Counts include only the students who entered college in the fall of the year immediately following the school year in which graduation occurred.

c) Counts by grade will differ slightly from that shown within the source documents cited in the "Bibliography" due to the distribution of students within ungraded classes and self-contained special education classes into appropriate grades.

d) Student counts prior to the 1978-79 school year were taken from the 180-Day Enrollment Collection (official count); student counts thereafter were taken from the 135-Day Average Daily Membership Collection (official count). All projected figures, however, are based on Average Daily Membership.

e) The above graduation rates (% high school graduates) do not reflect current efforts to reduce dropouts. Some of the displayed rates for future years are partially based on factors that already have occurred. Any substantial improvement in the rates will be due to current programs, the impact of which cannot yet fully be determined.

1989	867	1995-96	990	114.19											

a) In a few instances, student counts may differ slightly from cited source documents due to the inclusion of data from school reports that were received after the sources were published.

b) Counts include only the students who entered college in the fall of the year immediately following the school year in which graduation occurred.

c) Counts by grade will differ slightly from that shown within the source documents cited in the "Bibliography" due to the distribution of students within ungraded classes and self-contained special education classes into appropriate grades.

d) Student counts prior to the 1978-79 school year were taken from the 180-Day Enrollment Collection (official count); student counts thereafter were taken from the 135-Day Average Daily Membership Collection (official count). All projected figures, however, are based on Average Daily Membership.

e) The above graduation rates (% high school graduates) do not reflect current efforts to reduce dropouts. Some of the displayed rates for future years are partially based on factors that already have occurred. Any substantial improvement in the rates will be due to current programs, the impact of which cannot yet fully be determined.

e) The above graduation rates (% high school graduates) do not reflect current efforts to reduce dropouts. Some of the displayed rates for future years are partially based on factors that already have occurred. Any substantial improvement in the rates will be due to current programs, the impact of which cannot yet fully be determined.

a) In a few instances, student counts may differ slightly from cited source documents due to the inclusion of data from school reports that were received after the sources were published.

b) Counts include only the students who entered college in the fall of the year immediately following the school year in which graduation occurred.

c) Counts by grade will differ slightly from that shown within the source documents cited in the "Bibliography" due to the distribution of students within ungraded classes and self-contained special education classes into appropriate grades.

d) Student counts prior to the 1978-79 school year were taken from the 180-Day Enrollment Collection (official count); student counts thereafter were taken from the 135-Day Average Daily Membership Collection (official count). All projected figures, however, are based on Average Daily Membership.

e) The above graduation rates (% high school graduates) do not reflect current efforts to reduce dropouts. Some of the displayed rates for future years are partially based on factors that already have occurred. Any substantial improvement in the rates will be due to current programs, the impact of which cannot yet fully be determined.

a) In a few instances, student counts may differ slightly from cited source documents due to the inclusion of data from school reports that were received after the sources were published.

b) Counts include only the students who entered college in the fall of the year immediately following the school year in which graduation occurred.

c) Counts by grade will differ slightly from that shown within the source documents cited in the "Bibliography" due to the distribution of students within ungraded classes and self-contained special education classes into appropriate grades.

d) Student counts prior to the 1978-79 school year were taken from the 180-Day Enrollment Collection (official count); student counts thereafter were taken from the 135-Day Average Daily Membership Collection (official count). All projected figures, however, are based on Average Daily Membership.

e) The above graduation rates (% high school graduates) do not reflect current efforts to reduce dropouts. Some of the displayed rates for future years are partially based on factors that already have occurred. Any substantial improvement in the rates will be due to current programs, the impact of which cannot yet fully be determined.

a) In a few instances, student counts may differ slightly from cited source documents due to the inclusion of data from school reports that were received after the sources were published.

b) Counts include only the students who entered college in the fall of the year immediately following the school year in which graduation occurred.

c) Counts by grade will differ slightly from that shown within the source documents cited in the "Bibliography" due to the distribution of students within ungraded classes and self-contained special education classes into appropriate grades.

d) Student counts prior to the 1978-79 school year were taken from the 180-Day Enrollment Collection (official count); student counts thereafter were taken from the 135-Day Average Daily Membership Collection (official count). All projected figures, however, are based on Average Daily Membership.

e) The above graduation rates (% high school graduates) do not reflect current efforts to reduce dropouts. Some of the displayed rates for future years are partially based on factors that already have occurred. Any substantial improvement in the rates will be due to current programs, the impact of which cannot yet fully be determined.

a) In a few instances, student counts may differ slightly from cited source documents due to the inclusion of data from school reports that were received after the sources were published.

b) Counts include only the students who entered college in the fall of the year immediately following the school year in which graduation occurred.

c) Counts by grade will differ slightly from that shown within the source documents cited in the "Bibliography" due to the distribution of students within ungraded classes and self-contained special education classes into appropriate grades.

d) Student counts prior to the 1978-79 school year were taken from the 180-Day Enrollment Collection (official count); student counts thereafter were taken from the 135-Day Average Daily Membership Collection (official count). All projected figures, however, are based on Average Daily Membership.

e) The above graduation rates (% high school graduates) do not reflect current efforts to reduce dropouts. Some of the displayed rates for future years are partially based on factors that already have occurred. Any substantial improvement in the rates will be due to current programs, the impact of which cannot yet fully be determined.

a) In a few instances, student counts may differ slightly from cited source documents due to the inclusion of data from school reports that were received after the sources were published.

b) Counts include only the students who entered college in the fall of the year immediately following the school year in which graduation occurred.

c) Counts by grade will differ slightly from that shown within the source documents cited in the "Bibliography" due to the distribution of students within ungraded classes and self-contained special education classes into appropriate grades.

d) Student counts prior to the 1978-79 school year were taken from the 180-Day Enrollment Collection (official count); student counts thereafter were taken from the 135-Day Average Daily Membership Collection (official count). All projected figures, however, are based on Average Daily Membership.

e) The above graduation rates (% high school graduates) do not reflect current efforts to reduce dropouts. Some of the displayed rates for future years are partially based on factors that already have occurred. Any substantial improvement in the rates will be due to current programs, the impact of which cannot yet fully be determined.
